

Setup Module UI Standardization Plan

Current Problem

Right now the Setup module has repeated UI patterns in Site, Rate, Manpower, Team, Inventory, BOQ, P&M, etc. Each screen has its own search bar, filter, download button, dropdown, placeholder, and action button styling. Small differences are appearing everywhere, making the UI feel inconsistent.

Recommended Component Plan

Create shared reusable components for all Setup screens.

1. Setup View Header / Toolbar Component

Used in all View/List screens.

- Search Bar
- Filter Button
- Download Button
- Select All
- Delete Selected

Optional Props:

showSearch, showFilter, showDownload, showSelectAll, showDelete, onSearch, onFilter, onDownload, onSelectAll, onDelete.

Each module can enable or disable features through props.

2. Setup Dropdown Component

Use one common dropdown style everywhere for Site, Category, Team, Manpower and Work Type selection.

Benefits:

- Consistent placeholder style
- Same border radius
- Same font size
- Consistent dropdown height
- No overflow issues

3. Setup Empty State Component

Standard empty state for all modules.

Examples:

- No Site Found – Add Site Details
- No Manpower Found – Add Manpower Details

Props:

title, description, buttonText, onAdd

4. Setup Import / Download Buttons

One reusable button design for:

- Download Sample
- Import Sheet

- Upload Excel
- Download List

5. Setup List Card Component

Reusable card containing:

- Icon
- Title
- Subtitle / Details
- Arrow / Open
- Delete Button
- Selection Checkbox

Why This Is Best

- Consistent UI across Setup modules.
- Faster future changes.
- Standardized spacing, typography and controls.
- Reduced duplicate code.
- More professional ERP experience.

Implementation Approach

Do not refactor everything at once.

Step 1: Create shared Setup components.

Step 2: Apply them to Site.

Step 3: Verify the design.

Step 4: Apply to Rate and Manpower.

Step 5: Apply to Team, Inventory, BOQ and P&M.;

This minimizes risk while keeping existing functionality unchanged.
